Color card - MarMoreti

standard granulations M 1-4 mm / M 4-6 mm / M 4-8 mm / M 8-12 mm

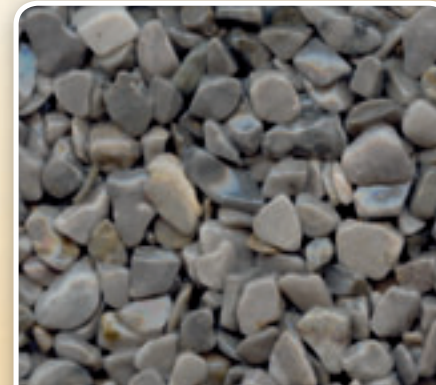

bianco carrara

botticino

breccia pernice

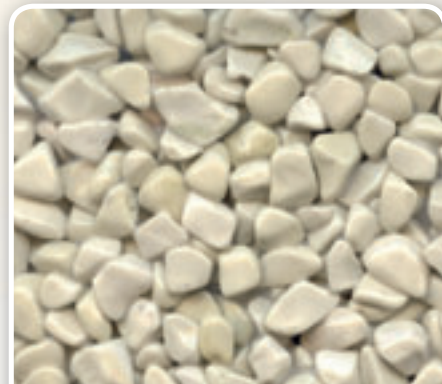

ochialino

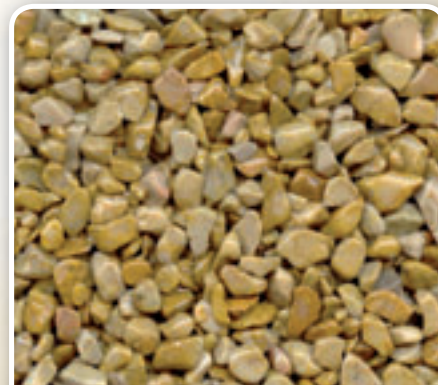

bardiglio azzurro

nero ebano

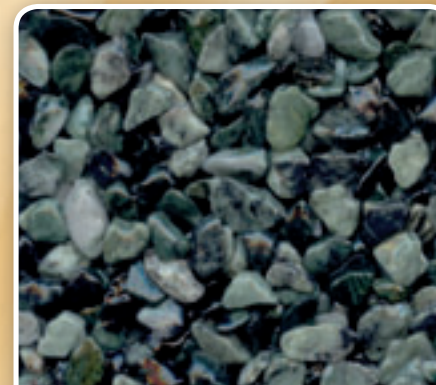

bianco verona

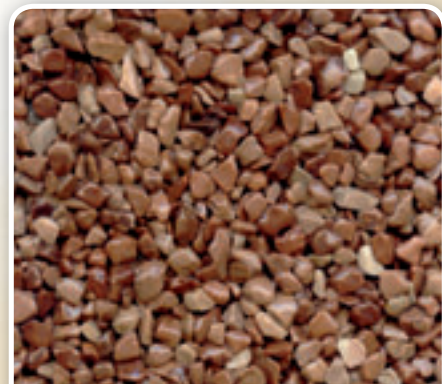

giallo mori

giallo siena

verdi alpi

marrone

rosa corallo

rosso ambrogia

grigio garnico

MarMoreti are naturally formed marble granulates in brilliant colour shades, rounded in an industrial process. Effective as polymer-bonded marble carpets based on epoxy or polyurethane.

Washing and drying processes are essential for both, visual and technical properties. Washing removes contaminations but drying is even more important. Because of low abrasive load in the drying process, fine dust particles are not formed and do not remain on the granulate. Our production methods guarantee pureness of MarMoreti and its distinctive, bright shining high colour intensity.

Technical strenghts are positively improved as the binder is used for binding granulates, and not dust.

After drying, there is no moisture left in MarMoreti. As a result, no moisture will react with resin to a milky, opaque granule coating.

MarMoreti are available in standard fractions: 1-4 mm, 4-6 mm, 4-8 mm and 8-12 mm.

Not rounded (broken) marble granulates and different gradations from 1 to 16 mm on special order. For more information, please feel free to contact us.
